

ERP BASIS

SAP R/3 Services through basis

System Parameters
Basic Principle
Client / Server Architecture
Open System Principle
OS Platform portability
Database Portability
Front end Portability
Distributed Application & Integration
Application Management
Provision on Business up sizing
Enterprise Data Modeling
Using R/3 Tools
Multitier Architecture
Client / Server Configuration

Mix Platform Application Environment

Communication / WAN / LAN / Program
Application Methodology
Dynamic Programming
Runtime Environment
Application Dispatcher
Data Directory Concept
Handling Multicomponent
Multiprocessor
System Management
Background Processing
Spooling & Control * Memory Management * Extended Memory
Interface Third party Product * Database & SQL Service * Satellite
System * Security * Confidentiality

Installation and Guidelines

Elements in SAP R/3 installation
Installation requirement
System sizing
Installation File Systems
Installation of RDBMS
Installation of SAPInst tools
Install central Instance
Load Database
Installation Database
Installation of Presentation Layer
Post installation Activities

CCMS & Configurations
